## THE ULTIMATE SKIN SOLUTION

Discover an innovative solution to improve skin complexion and reduce irregularities.

*“Lumecca is fantastic! My brown sunspots are gone and I have a clear, youthful-looking complexion once again.”*

- GILLIAN | PATIENT

### WHAT IS LUMECCA?

Lumecca is a powerful intense pulsed light (IPL) to treat pigmented and vascular lesions. After just one treatment, patients notice significant improvements.

### WHAT ARE THE BENEFITS?

Lumecca improves the appearance of:

- Age spots (red/brown pigmentations)
- Vascular lesions such as facial telangiectasias (spider veins) and poikiloderma
- Rosacea (redness)
- Freckles
- Sun damage

Please speak to your provider to see if you are a candidate.

### WHAT AREAS CAN BE TREATED?

Lumecca can be used on all areas of the body. The most common treatment zones are areas regularly exposed to the sun. This often includes the face, neck, décolletage, legs, hands, and arms.

### WHAT CAN I EXPECT?

During treatment, there will be a bright flash of light from Lumecca and a sensation on your skin that feels like a light snap from an elastic band. Redness and a slight warming of the skin are normal after treatment and usually subside within an hour. Over the next 24-48 hours you may see a darkening of pigmented spots; in the week afterwards the pigmented lesions flake off, leading to an evening out of skin tone. After treating vascular lesions you may see the vein blanch and disappear or a color change in the vessel which dissipates after a few days.

### HOW MANY SESSIONS ARE RECOMMENDED?

Your provider will recommend the ideal number of sessions to be performed based on your personal condition. Treatment times and frequency will be specifically tailored to obtain optimal results. Patients may find they are sensitive to sunlight immediately after treatment. It is recommended to avoid direct sunlight and tanning.

### WHAT STEPS MUST BE TAKEN BEFORE THE PROCEDURE?

Avoid direct, excessive sun exposure or tanning one month prior to treatment.

### HOW QUICKLY WILL I SEE RESULTS?

Visible improvements in skin sun damage and complexion can typically be observed a few days after the first session, with the most visible results after 1-2 weeks.
